

Cam-action indexing plungers with stop, Form A and C

Item description/product images

Description

Material:

Steel grade 5.8.

Version:

Black oxidised.

Pin hardened and ground.

Note:

Cam-action indexing plungers are used when the indexing pin should not project all the time. Turning the handle through 180° retracts the pin.

A notch ensures that the handle remains in this position.

A stop prevents the handle being rotated through more than 180° ensuring that the pin remains retracted.

Selecting which side the stop is on defines the rotation direction of the plunger.

Drawing reference:

- 1) Stop, left
- 2) Stop, right
