

Indexing and clamping grip with optical locked indicator

Item description/product images

Description

Product description:

The indexing and clamping grips enable the positioning, securing and clamping of diverse positioning elements with just one product. Indexing is carried out using the indexing pin and the item is clamped using the end face of the sleeve. A protruding signal button means that the indexing pin is not completely extended.

Material:

Star grip black grey thermoplastic.
Signal button red thermoplastic.
Threaded sleeve 1.0718.
Indexing pin stainless steel 1.4305.

Version:

Steel electro zinc-plated.
Stainless steel bright.

Advantages:

Optical indication of the engagement function.
Indexing and clamping with one product.
Ergonomic operation via star grip.

On request:

Special versions.

Accessory:

Hexagon nuts thin DIN 439
